# Count Things from Photos: the must-have counting app for businesses

Count Things from Photos is an app that automatically counts objects from your photos at the push of a button.

Tuesday, February 5th, 2021 – This app revolutionizes inventory using **Computer Vision, an AI field** that trains computers to interpret and understand the visual world. While widely used in the **manufacturing** field for counting products such as bars, tubes and scaffolding, **Count Things from Photos has applications in** a variety of other fields such as:

- • **Warehousing** - for optimized logistics;
- • **Health care & medical** - for vials, pills and even tools;
- • **Farming** - for plants and livestock.

How does it work?

The app uses **Counting Templates** that **are trained for a specific object**, like pipes, bars or vials. Once the template is chosen the **app will accurately detect the objects the user needs to count.** Watch the demo video and our step-by-step guide here:
https://countthings.com/en/how-it-works-mobile-devices

If the results are not 100% accurate a support team is available to work with the user to improve the Counting Template. Alternatively, Count Things can create new Counting Templates based on real images provided by the user, to perfectly match their needs.

Key Features

- **Platforms -** the app is available on iOS, Android and Windows and can be downloaded from app markets or directly from the developer's website here: https://countthings.com/en/#download
- **Business integration** - Multiple images can be processed from camera feeds or from existing folders, automating the quantification and verification process.
- **Forms** - results can be customized with details such as product ID, category, checklists, or attributes (volume, diameter, etc.) The data can be saved on the user's device, sent via e-mail, uploaded to a database or to an external web service.
- **Database integration** - the results can also be uploaded to a cloud service (like Dropbox, Google Drive or Microsoft One Drive) or downloaded to a device.
- **Online or offline** - once the license is activated and Counting Templates downloaded, CountThings can run offline or in an intranet environment, making it both secure and usable when connectivity is unavailable.

Count Thing from Photos: Beyond the business

'The Count Things from Photos app is so much more than a productivity tool for businesses.
Count Things is a tight knit community, and we understand how the current pandemic is challenging our way of life. To be part of the global effort we have created a **free demo Counting Template for COVID-19 vaccine vials** to aid medical professionals.'

About the Company

CountThings by Dynamic Ventures is a family of desktop and mobile applications that use computer vision to automate counting items from photos, in a wide range of fields and industries such as manufacturing, commercial, medical, constructions, agricultural or timber.

Dynamic Ventures has been at the forefront of innovative custom software development since 1986, with offices in Silicon Valley, Romania, and Vietnam. The teams work closely with the clients, often becoming in effect, part of their company for the duration of the project.
